Art Unit: 3679

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

*Election/Restrictions*

2. Claim 24 has been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election of Species XII shown in Fig. 11 was made without traverse in the reply filed on March 5, 2007. (Note: since claim 23 is not a generic claim, even if it were allowable, claim 24 would not be rejoined.)

*Specification*

3. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter, "an inner diameter of the securing ring arranged in the respective groove is less than an outer diameter of the ball head".

*Claim Objections*

4. Claims 28 & 29 are objected to as being duplicates of claims 23 & 27.

*Claim Rejections - 35 USC § 112*

5. Claims 23, 25 & 27-30 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which

Art Unit: 3679

applicant regards as the invention. Claim 23, 27 & 28 each end with a limitation, "the ball head with respect to the inner ring" whose meaning is unknown.

*Claim Rejections - 35 USC § 103*

6. Claims 23, 25 & 27-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Welschhof, US 5,199,925 in view of Schwabe, US 2,670,975. Figs. 1 & 2 show a tripod joint for transmitting a driving torque between two driving elements of a drive train, comprising: a joint outer part 1 and a joint inner part 7. Figs. 1 & 2 show the joint inner part 7 having a ball joint having a ball head 9, the ball head mounted in a recess in an inner ring 12 pivotable with respect to the inner ring, the inner ring 12 and a rolling body 15 configured to transmit driving torque to the outer joint part 1. Welschhof shows the recess of the inner ring 12 comprising a spherical surface instead of cylindrical hole having two securing rings radially extending from two spaced apart grooves in the cylindrical hole such that each securing ring has an inner diameter that is less than the outer diameter of the ball head 9

Schwabe teaches in Figs. 4 & 5, that an inner ring 8 with a recess comprising a cylindrical hole having two securing rings 15 radially extending from two spaced apart grooves such that each securing ring has an inner diameter that is less than the outer diameter of the ball head 7 is a functional equivalent of a ring with a spherical recess 9. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the tripod joint of Welschhof by making the inner ring with recess as a cylindrical hole having two securing rings radially extending from two spaced apart grooves instead of spherical recess since both such recesses are functional equivalents as taught by Schwabe.

*Response to Arguments*

7. Applicant's arguments with respect to claims 23, 25 & 27-30 have been considered but are moot in view of the new ground(s) of rejection.

*Conclusion*

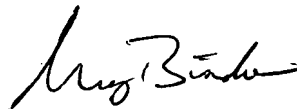

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
